Tech Competencies

NodeJs	ReactJs
Express	MongoDB
Solidity	NextJs

My main strength

An eagerness to learn and an ability to tailor my approach to fit the needs of a project.

What I'm looking for

A fullstack position on a team, that understands the value of a good UX & UI design.

An ideal frontend stack would be React.

An ideal backend stack would be Nodejs/Express.

Hobbies

Taking long walks and reading a good book.

Software Engineer - ggconcept.org (2022 - Present)

A company that offers financial and investment services that just recently went public, so they needed a platform for users to easily purchase shares.

Node Js

Express

MongoDb

React

Wordpress

- Built a webapp with an intuitive and straightforward UI where users can purchase shares, monitor and withdraw dividends. Role: all the design, frontend, and backend
- Built rewards & referral system, allowing users to earn by inviting referrals. It increased the number of new users and improved onboarding. Role: all the design, frontend, and backend
- Created a wordpress website that contains the blog, basic information about the company and serves as a portal to the web application. Role: all the design and backend
- Built an easy-to-use admin panel to perform CRUD operations on the users, shares and announcements, it serves as a GUI for the database. Role: all the design, frontend, and backend

Blockchain Developer - swayverse.io (2021 - 2022)

An NFT marketplace owned by a former NFL player, that enables athletes monetize their influence (social currency) in the form of NFTs.

Node Js

Solidity

React

- Wrote multiple secure smart contracts that was responsible for all the business logic of the dApp which included minting, escrow auctions, sales and transfer of non-fungible tokens.
- Built out a frontend that interacted with the smart contracts to enable users to easily view, manage and purchase NFTs. Role: all the design, wireframes, and frontend

Fullstack Developer - freelance (2019 - 2021)

Built fully responsive web applications with focus on user experience, best practices and writing high-quality code.

Here are some projects where I integrated a couple of payment gateways; from crypto to traditional and I was responsible for all the design and implementation: more.online, wealthflux.org, jenmec.com

Node Js

Express

MongoDb

EJS

Heroku
